

Transfer to a new PC

It's almost as easy as 1-2-3

1. Copy the whole of the **c:/superpay** directory onto a memory stick
2. Copy this directory from the memory stick onto the **C:/ on the new computer**
3. Create a **short-cut** for the **superpay.exe** file in the c:/superpay directory (*right click on it, create shortcut*) → & to desktop

Now fire up SuperPay, and [let us know to reset the license key](#) as soon as you have received the *multi-install error message*.

Tip : rather do this immediately after a payroll than just before a payroll, as you may need a an hour or two for the license reset to work through the system, keeping in mind power outings as well
